

Pablo Arancibia Senior Backend Software Engineer Málaga, Spain (Remote) |
pabloarancibia.dw@gmail.com | github.com/pabloarancibia |
linkedin.com/in/arancibiapablo

Profile Results-oriented Senior Backend Software Engineer with over 10 years of experience architecting high-performance, cloud-native systems. Expert in Python ecosystems (FastAPI, Django) with strong complementary proficiency in Node.js, TypeScript, and JavaScript for versatile, cross-functional backend development. Proven track record of building scalable Microservices, Event-Driven Architectures, and integrating complex APIs (REST/gRPC). Passionate about software craftsmanship, Domain-Driven Design (DDD), and delivering high-availability solutions that drive business metrics and system reliability, complemented by foundational knowledge in AI/RAG architectures and Large Language Model (LLM) integrations..

Core Competencies

- **Languages:** Python (Expert - 10+ years), TypeScript, JavaScript, SQL, C++
- **Frameworks & Libraries:** FastAPI, Django, Django REST Framework (DRF), Pytest, Node.js, Express, Angular
- **Cloud & Infrastructure:** GCP (Cloud Run, Cloud Functions, Pub/Sub, IAM), AWS, Microsoft Azure, Docker, Kubernetes (AKS/EKS), Terraform
- **DevOps & Observability:** CI/CD Pipelines, GitHub Actions, Bitbucket, Datadog, Prometheus, Grafana
- **Architecture:** Microservices, Event-Driven Architecture (EDA), Hexagonal (Ports & Adapters), Domain-Driven Design (DDD), Serverless
- **Data & Integration:** PostgreSQL, Redis, RabbitMQ, MongoDB, DynamoDB, Firestore, MQTT, IoT Backend Integration
- **Fintech & Security:** PSD2, Open Banking, OAuth2/OIDC, JWT, Financial Data Compliance
- **AI Concepts (Foundational):** Large Language Models (LLM) API Integration, RAG Systems, Vector Databases (ChromaDB), Model Context Protocol (MCP) Fundamentals

Professional Experience

ATM | Spain (Remote)

Senior Backend Software Engineer | Jan 2026 - Jul 2026

- Designed and implemented a new backend architecture from scratch using Django Rest Framework and PostgreSQL.

- Executed a temporary, high-impact six-month contract focused strictly on backend architecture and software design, successfully delivering a scalable and maintainable core system foundation.

Brite Payments | Spain (Remote)

Senior Backend Software Engineer | May 2024 - Dec 2025

- Built event-driven data processing pipelines using Python (FastAPI) and GCP Pub/Sub, ensuring ACID consistency across distributed databases.
- Developed robust backend solutions strictly adhering to PSD2 regulations and standards (BerlinGroup, Obie), handling sensitive KYC, Account Information (AIS), and Payment Initiation (PIS) data securely via OAuth2 and JWT.
- Optimized cloud-native infrastructure on GCP (Cloud Run, Cloud Functions) by implementing resilience patterns (circuit breakers, retry logic), achieving a proven 99.9% uptime.

Freelance | Spain (Remote)

Senior Backend Developer | 2024

- Architected and developed a comprehensive Testing Suite Framework from scratch for an existing platform using Pytest and Django, significantly reducing regression bugs and ensuring API reliability.
- Engineered and scaled backend systems using Node.js over a dedicated quarter, building robust microservices/APIs that seamlessly integrated with the core Python infrastructure.
- Built and deployed automated CI/CD pipelines to streamline quality assurance and deployment cycles, increasing release frequency.

ECOM Chaco | Argentina (Remote)

Lead Backend Developer | 2020 - 2023

- Led backend development teams using Scrum methodologies; managed requirements analysis, task prioritization, and architectural decision-making for government-level solutions.
- Designed and optimized scalable dual-stack architectures using Python (Django/DRF) and Node.js, ensuring seamless backend orchestration and integration with Angular frontends.

Freelance | Argentina

Backend Developer (IoT Integration) | 2022

- Executed end-to-end backend development of an IoT state-management system integrating RFID technology and MQTT protocols for real-time data orchestration.

- Built the server-side ecosystem using Node.js, Express, C++, Docker, and Nginx, prioritizing low-latency sensor data ingestion and processing.

Argentine Air Force | Argentina

R&D Backend Engineer & Team Lead | 2014 - 2020

- Led R&D efforts for upgrading radar signal processors, developing backend systems and algorithms using Python and C++ for real-time signal analysis.
- Managed a team of 17 professionals as Head of Communications and IT Services, overseeing critical backend network infrastructure (Linux, Cisco) and operational budgeting.

Workshops & Continuous Learning

- **BiznagaFest 2025: Advanced AI & MCP Track** | Málaga | 2025
 - Practical implementation of Model Context Protocol (MCP) servers and security risk analysis in Agentic AI systems (Vertex AI SDK + osquery).
- **Google Cloud: Startup Technical Guide to AI Agents** | 2025
 - End-to-end agent lifecycle training (Prototype to Production), RAG implementation concepts, and Gemini multimodal capabilities.

Academic Education

- **Internet of Things (IoT) Specialty** | University of Buenos Aires (UBA) | 2020 - 2023
 - Focus: MQTT, TCP/IP, LoRaWAN, IoT Backend Infrastructure, Cybersecurity.
- **Degree in Computer Science** | National University of Lanús | 2020 - 2022
 - Focus: Systems Design, Computational Thinking.
- **Diploma on Data Science** | ITBA | 2020
 - Focus: Advanced SQL, ETL, Python, Machine Learning/Neural Networks.
- **Cardano Blockchain Developer** | Emurgo | 2021 - 2022
 - Focus: Haskell, Blockchain fundamentals.

Language Skills

- English: Full Professional Proficiency (Daily use in international teams)
- Spanish: Native
